Approval of EPY epoxy resin for chocking of Wärtsilä engines

Dear Sirs

We refer to your letter of 19 November 1999 with product information about EPY chocks and regret the delay in replying to it.

After having examined the documentation we received we would like to inform you that we approve the use of EPY epoxy resin as chocking material for Wärtsilä engines.

However, the dimensioning of the chocks and the casting of the chocks must be approved by the Classification Society for each specific project.

Yours faithfully
